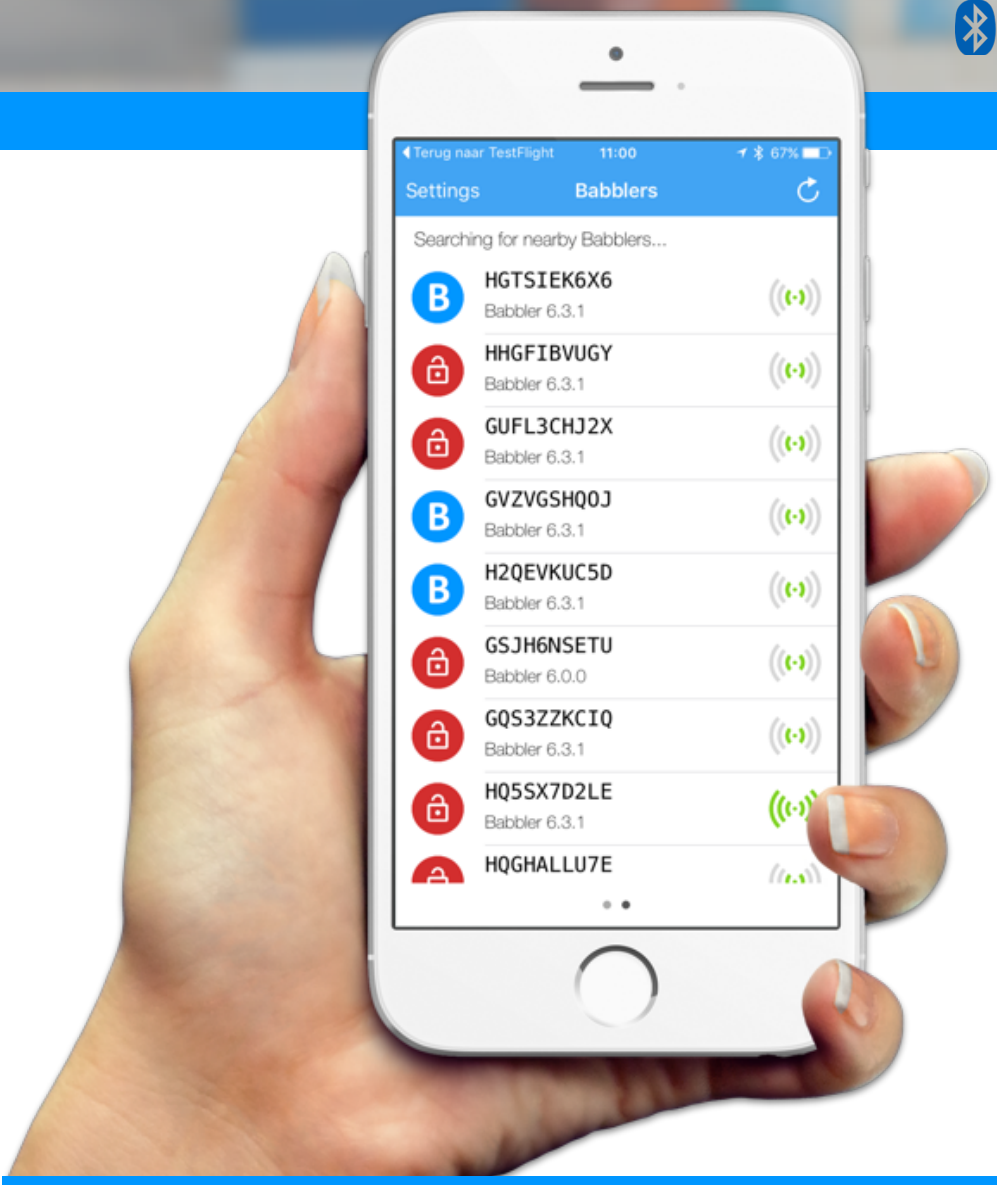
Babbler is a next-generation tamper evident seal

Bluetooth™ NB-IoT LoRa™



Digital Seal

Temperature Log

Shock Detection

Simple to use, innovative solution for supply chain monitoring.
Includes temperature log.

Babbler

Benefits

For Shippers

- Babbler gives you peace of mind that the temperature of your shipment is correct.
- Babbler reduces administrative work because seal status, temperature logs and transport documents are automatically linked and digitally available.
- Babbler detects shocks and records impact and mishandling of fragile or sensitive products during transportation.

For Carriers

- Babbler will get you in a green lane at customs so you can be more predictable to your customers.
- Lets you weed out suspicious shipments so the rest of the shipments are not delayed.
- Shows vulnerable steps in your process so you can improve security.
- Works with your smartphones and in-cab tablets.

How does Babbler work?

Babblers are small re-usable wireless devices (7,5cm x 2,5cm). You stick them on the inside of a container or trailer door just before locking it. They follow a shipment end-to-end and provide online visibility. You start and inspect them wirelessly: with a smartphone, or through a long range radio option. Attaching and removing a Babbler is easy. It can be fixed with a magnet or double-sided tape. Download an app on your smartphone or in-cab device and you are ready to go.

Babbler allows unobtrusive and high quality sealing of containers. Because the device is inside the container it is much harder to foil than existing seals. The digital encryption on the seal cannot be repaired once tripped. Additionally the temperature of the cargo is logged and can be read wirelessly from outside the container. Furthermore the babbler sensor can easily identify your containers and shipments. The devices advertise shipment identification allowing smooth tracking and tracing. Shipment documents can be added and viewed on a smartphone.

Itude Mobile

Babbler is created in The Netherlands by Itude Mobile. Itude Mobile creates innovative mobile apps for supply chains. Our team of experienced professionals has a strong focus on IT innovation and strong knowledge of the supply chain.
